August 25, 2021

The Honorable Charles Schumer Majority Leader, U.S. Senate

The Honorable Debbie Stabenow Chairwoman, Senate Agriculture Committee The Honorable Nancy Pelosi Speaker, U.S. House of Representatives

The Honorable David Scott Chairman, House Agriculture Committee

Re: Reconciliation Support for Climate Solutions & Equity in Agriculture

Dear Majority Leader Schumer, Speaker Pelosi, Chairwoman Stabenow, and Chairman Scott,

We appreciate your leadership and recognition of the deep connections between agriculture, climate change, and the overarching importance of equity. We strongly support adoption of a robust reconciliation package that advances climate, economic, and equity goals together. In particular, to build a food system that is resilient enough to feed us in a changing climate, we must dramatically increase public investments in sustainable farming and farming communities – including those who have been, and continue to be, underserved by U.S. farm policy.

USDA's well-documented and ongoing track record of marginalization of small-scale farmers and discrimination against farmers of color, especially in its farm loan programs, has left many small and limited-resource farms, particularly those owned by Black, Indigenous, and other farmers of color, on the brink of financial ruin. These farmers are often leaders in climatefriendly agriculture, innovators in regionally tailored farming practices, and key providers of food for local communities. The National Institute for Food and Agriculture calls small farms "a nursery for the development of new enterprises and marketing systems," and this is especially true of farms operated by people of color.

However, these farmers also face enormous barriers, and they need immediate support, including debt relief and other tools that will help them access and retain land and capital. In addition, they need regionally and culturally appropriate technical assistance, research, and market development.

To ensure that the Build Back Better agenda supports truly diversified and climate-friendly farming that delivers meaningful emissions reductions and climate resilience, aligns with the Justice40 Initiative, and does not exacerbate long-standing inequities in our food system, the reconciliation agriculture package should direct significant funding to climate-friendly agriculture and resources for underserved producers. While significantly more funding is needed in the future to support healthy ecosystems, underserved producers and workers, food security, and climate resilience, **at a minimum**, the reconciliation investments should include:

• **\$30B for conservation programs** with a focus on climate-friendly agricultural practices and organic production, including sustainable pest management without synthetic (fossilfuel derived) pesticides, cover cropping, reduced tillage, hedgerow planting, pollinator protection, composting, prescribed grazing, and other regenerative practices that

increase resilience to climate change, improve the health of workers, communities, and soil, protect water and air quality, increase biodiversity, and help store carbon in the soil

- **\$5B for sustainable and organic agriculture research programs** focused on climate resilience-related research, education, and extension programs with strong dedicated support for 1890s and 1994 Land Grant Institutions
- \$3B to support resilient rural development through investments in communitybased infrastructure focused on value-added agriculture, rural renewable energy, and infrastructure for local processing of crops and livestock to improve food system resilience and better support small- and medium-sized farmers
- **\$10B for debt relief** to stabilize the operations of producers who have not received a fair share of aid from recent federal support programs.

The package should guarantee socially disadvantaged producers the opportunity to participate in, and be key beneficiaries of, any program funded through the package, regardless of past participation and without cumbersome application requirements. These resources should support the next generation of farmers, including beginning and socially disadvantaged farmers and ranchers, as well as farmworkers desiring to enter farming as producers, and support them as they build on their knowledge of traditional ecological stewardship.

In addition, the package should fund an on-farm Civilian Conservation Corps program that:

- Trains the next generation of farmers to adopt climate-friendly practices, particularly in underserved regions;
- Creates job opportunities for beginning and socially disadvantaged farmers, ranchers, and farmworkers that pay a living wage and provide pathways to long-term employment;
- Protects farmer and farmworker health, safety, and economic stability;
- Increases biodiversity, restores critical wildlife habitat, and increases carbon sequestration on working lands;
- Promotes rural entrepreneurship and rural economic development; and
- Prioritizes environmental justice for frontline communities

We look forward to working with you to fully realize the many benefits of climate-friendly agriculture and to ensure producers of color receive the support they deserve – this year and into the future.

Sincerely,
